

Who is BSI intended for?

Build Security In is intended for use by software developers and software development organizations who want information and practical guidance on how to produce secure and reliable software. BSI content is based on the principle that software security is fundamentally a software engineering problem and must be addressed in a systematic way throughout the software development life cycle. BSI contains and links to a broad range of information about best practices, tools, guidelines, rules, principles, and other knowledge to help organizations build secure and reliable software.
